

simple and beautiful shopping cart system uploadera.php has a file upload vulnerability

The simple and beautiful shopping cart system has a file upload vulnerability in the uploadera.php file that allows an attacker to upload any type of file and write malicious commands into the file that cause the attacker's code to be executed by the target server, giving the effect of remote command execution.

```
uploader.php X
admin > uploader.php
1  <?php
2      require_once 'db/conn.php';
3
4      if(isset($_POST['submit'])){
5
6          // if($_FILES['photo']['name'][$code]['price']['madein'] != "" && $_POST['name'] != ""){
7              $name = $_POST['name'];
8              $code = $_POST['code'];
9              $price = $_POST['price'];
10             $madein = $_POST['madein'];
11             $image_name = $_FILES['photo']['name'];
12             $image_temp = $_FILES['photo']['tmp_name'];
13             $extension = explode('.', $image_name);
14             $image = time().".".end($extension);
15             move_uploaded_file($image_temp, "../accessoris/product/".$image);
16             $conn->query("INSERT INTO `accessoris` VALUES('id', '$name', '$code', '$image', '$price', '$madein')") or die(mysqli_errno($conn));
17             header('location:accessoris.php');
18             // }
19         }
20     ?>
```

PHP Version 5.4.45	
	
System	Windows NT DESKTOP-M4LV1AG 6.2 build 9200 (Windows 8 Enterprise Edition) i586
